Prompt: Is this loop correct ? for i in range (len (arr) - 1): if arr [i]
> arr [i + 1]: swap (arr , i , i + 1)

Generated: Yes, the loop and the `swap` operation are correct for this purpose. Let's break down why: * **`for i in range(len(arr) - 1):`** : This loop iterates through the array `arr` from the last element up to (but not including) the second-to-last element. This is crucial because you're comparing each element to the *next* element to find out if they need to be swapped. * **`if arr[i] > arr[i+1]:`** : This is the core logic. It checks if the element at index `i` is greater than the element at index `i+1`. If it is, it means we need to swap these two elements. * **`swap(arr, i, i+1)`** : This line
