Prompt: Class ify the radiology impression : Chest CT shows
no evidence of pulmonary embolism ; lungs otherwise clear .

Generated: *Okay, let's break down this radiology impression. Here's a classification and explanation: **Classification:** * **Negative Pulmonary Embolism (PE):** This is the primary finding. The CT scan doesn't show any signs of a blood clot in the pulmonary arteries. * **Clear Lungs:** This is a positive finding – the lungs appear normal, without any abnormalities like pneumonia, masses, or other signs of lung disease. **Interpretation & Significance:** This is a reassuring result. It suggests that the patient doesn't have a current pulmonary embolism. However, it's important to remember: * **It doesn't rule out PE entirely:** While the scan is negative, it doesn't guarantee there isn't a future PE. Risk factors (like a history of blood clots, certain medications, or underlying*
