

AttnLRP 0  1.2

Prompt: Evaluate the bug severity : The recent patch fixed the memory leak , but unfortunately triggered a catastrophic silent failure within the garbage collector .

Generated: ## Bug Severity: ***Critical** Here's a breakdown of why this is a Critical severity bug: * **Catastrophic Failure:** The description explicitly states a "catastrophic failure." This means the system is likely to become unstable, unresponsive, or produce completely incorrect results. This isn't a minor inconvenience; it's a core functionality breakdown. * **Silent Failure:** This is *extremely* dangerous. Silent failures mean the system isn't alerting*
